

USING THE M3C PRIVATE NETWORK

- Plug in an Ethernet cable to one of the wall drops in room 028 or the lounge that has a red dot next to it
- Plug the other end of the Ethernet cable into the back of the M3C laptop
- Power up the laptop
- Click on the Apple in the upper left of the desktop
- Go down to Location and change from “Wireless” to “Private Network”
- In the Finder bar, click on the Go menu
- Click on Connect to Server
- Click on Local Network
- Click on Renderbot
- Click Connect
- Login with assigned username and password
- Click Connect
- Choose the volume with professor’s name (example: wnoiland)
- The volume will now show up on the desktop; Double click on the icon to mount the volume
- Click on the folder corresponding to the username you used to login
- When finished working, YOU MUST unmount the drive: Click on the volume’s icon on the desktop and drag to the Trash (Trash will turn into an Eject symbol)
- Go back to the Apple in the upper left
- Go down to Location and change it from “Private Network” to “Wireless”
- Unplug the Ethernet cable from the laptop and the wall
